

Perform a Technical Review

This training resource describes how to perform a Technical Review for LSF in the Proposal System

Requirements:

Able to login to the Proposals System, <https://proposal.facilities.rl.ac.uk>

Have been assigned a Technical Reviewer

Science and
Technology
Facilities Council

Contents:

- **Login**

- [Login to Proposals, \(your role - Experimental Scientist\)](#)
- [Select the appropriate Call and Proposals list](#)

- **Technical Review**

- [Technical Review overview](#)
- [Creating an Internal Review](#)
- [Assign a Technical Review](#)
- [Reassign multiple Reviewers](#)

FAP Reviews will be completed by LSF FAP members.

Exploring the Anomalous Magnetic Moment of Muons in High-Energy Particle Collisions

Understanding the ultrafast carrier dynamics in perovskite solar cells is critical for optimizing their performance and stability. This experiment aims to investigate the real-time behaviour of photo-generated charge carriers in state-of-the-art perovskite photovoltaic materials using advanced ultrafast spectroscopy techniques available at the Central Laser Facility (CLF), Harwell. By employing femtosecond pump-probe transient absorption spectroscopy and time-resolved photoluminescence, we will capture carrier lifetimes, diffusion processes, and recombination mechanisms with sub-picosecond resolution. The study will focus on correlating these dynamics with material composition, morphology, and device architecture. The insights gained will contribute to the fundamental understanding of charge transport and loss mechanisms in perovskites, guiding the development of more efficient and durable solar cell technologies.

Diego Fernández (diego.fernández@bham.ac.uk), Birmingham, UNITED KINGDOM

Tray Swift (swit@physics.utexas.edu), Petra Gnu (petra.gnu@strath.ac.uk)

When the Internal Reviewer logs in to the proposal system, they will see they have an action against this particular proposal.

Repeat the process, adding information to each technical review you have been assigned to.
If you have any issues or questions about the process, please contact fase-support@stfc.ac.uk

Reminder – if you have assigned someone as an Internal Reviewer you ***MUST*** contact fase-support@stfc.ac.uk to let them know, to ensure they have an Internal Reviewer role.

For questions regarding the review process please contact the FAP Secretary

The Central Laser Facility (CLF) at the Rutherford Appleton Laboratory is one of the world's leading laser facilities providing scientists from the UK and Europe with an unparalleled range of state of the art technology to carry out a broad range of experiments in physics, chemistry and biology. Our laser facilities range from advanced, compact tuneable lasers which can pinpoint individual particles to high power laser installations that recreate the conditions inside stars.
