Review a Proposal In Xpress

This training resource describes how to review a proposal submitted via LSF Xpress

Requirements:

Able to login to the Proposals System, <https://proposal.facilities.rl.ac.uk>

Have been assigned to review the proposals

Science and
Technology
Facilities Council

Contents:

- Login
- [Viewing proposals in Xpress](#)
- [View a proposal's details](#)
- [Reviewing a proposal](#)
 - Change the status of a proposal
 - Assign an Experiment Area to a proposal
 - Add a comment to a proposal
 - Save and Submit your review
- [Notes on status](#)
- [Export proposals to Excel](#)
- [Contact FASE support](#)

NOTE: You are only able to view proposals that are associated with the Facility you've been assigned to.

Title

Femtosecond Laser-Induced Phase Transitions in Topological Insulators

Abstract

Topological insulators (TIs) such as Bi Se and Sb Te exhibit robust surface states protected by time-reversal symmetry, offering a platform for ultrafast spintronic and quantum information technologies. This experiment aims to investigate femtosecond laser-induced phase transitions in these materials using the high-power Ti:Sapphire laser systems at the Central Laser Facility (CLF), Harwell. Utilizing 800 nm pulses with durations of ~35 fs and fluences ranging from 0.1 to 5 mJ/cm , we will perform time-resolved pump-probe reflectivity and time-resolved angle-resolved photoemission spectroscopy (TR-ARPES) to capture the ultrafast dynamics of electronic and structural transitions. The study will focus on the non-equilibrium response of the Dirac surface states and bulk conduction bands under intense photoexcitation, probing transient modifications in band topology, carrier relaxation pathways, and potential emergence of metastable or symmetry-broken phases. Complementary diagnostics such as ultrafast electron diffraction (UED) and coherent phonon spectroscopy will be employed to correlate electronic changes with lattice dynamics. These insights will advance our understanding of light-induced topological switching and pave the way for optically controlled quantum devices.

Principal Investigator

B I

Tips: Insert Format Tools

1. Comments are managed by only instrument scientists.

2. Comments are not be accessible to users or experiment safety reviewers.

3. Comments will be available for editing in all proposal statuses.

Tips: Octopus Under review

1. Change the status of a proposal to Under Review to enable experimental area selection.

2. Status can be changed to Unsuccessful, or Approved after an experimental area is selected.

3. Once a proposal is marked as Approved / Unsuccessful / Finished, the selected experimental area cannot be changed.

4. Further status changes are not allowed once a proposal is marked as Unsuccessful.

5. Status of Approved proposals can be changed to Unsuccessful / Finished.

6. Finished status can be marked only for Approved proposals.

Notes on Status

Submitted (Locked)	At the initial stage of Submitted (Locked), your only option is to change the status to Under Review. Once this is done you can assign an instrument to the proposal. Note: Comments can be added anytime.	Submitted (locked) ▲ Submitted (locked) Under review Approved Unsuccessful Finished						
Under Review	Once you’ve changed the status to Under review, you are not able to change it back again. Your only options for status change are Approved and Unsuccessful. You are still able to change the instrument.	Under review ▲ Under review Approved Unsuccessful Finished						
Approved	After you change the status to Approved, you can only change the status to Unsuccessful or Finished <i>Once Approved you cannot change the assigned instrument.</i>	Approved ▲ Approved Under review Unsuccessful Finished						
Unsuccessful	When you change the status to Unsuccessful <i>all options are locked</i> and the dropdown menus are no longer available.	<table><tr><th>Experiment Area</th><th>Technique</th><th>Status</th></tr><tr><td>Octopus</td><td>Octopus</td><td>Finished</td></tr></table>	Experiment Area	Technique	Status	Octopus	Octopus	Finished
Experiment Area	Technique		Status					
Octopus	Octopus	Finished						
Finished	Finished status can be marked only for Approved proposals, and once assigned <i>all options are locked</i> .

Help and Support

For technical issues please contact, FASE-support@stfc.ac.uk

The Central Laser Facility (CLF) at the Rutherford Appleton Laboratory is one of the world's leading laser facilities providing scientists from the UK and Europe with an unparalleled range of state of the art technology to carry out a broad range of experiments in physics, chemistry and biology. Our laser facilities range from advanced, compact tuneable lasers which can pinpoint individual particles to high power laser installations that recreate the conditions inside stars.
